Junction Box and Terminal Block Identification for the SWH-G02 Valve: Straight and Diagonal Designs

There are two designs for the junction boxes and terminal blocks for the **SWH-G02** size Northman valve: **Diagonal and Straight**. Knowing the design style is important for parts replacement.

The G02 size is an NFPA D02 size valve used as a direct acting valve and also as a pilot valve on the Northman piggy-back valves in the sizes of G04, G06 and G10. (The Northman SWH-G03 valve is unaffected, having only one design of junction box and terminal block.)

- 1. Diagonal Design Terminal Block**
- 2. Diagonal Design Junction Box**
- 3. Straight Design Terminal Block**
- 4. Straight Design Junction Box**
