● Pin Assignment

Contact	Function	-A1 voltage type	-F1 Current type
A	Power Supply	DC24V(19-35V)	
B		0V	
D	Differential amplifier input (command value)	$\pm 10V(R_e > 50K\Omega)$	4-20mA($R_e < 200\Omega$)
E		Reference Potential command value	
F	Measuring output (actual value)	$\pm 10V(I_L < 2mA)$	4-20mA($R_L < 200\Omega$)
C		Reference Potential actual value	
PE	Earthing	Connected to the valve side cover and housing	

Command value:

Positive command value (0...10 V or 12...20 mA) at D and reference potential at E result in flow from P → A and B → T

Negative command value (0...-10 V or 12...4 mA) at D and reference potential at E result in flow from P → B and A → T

Actual Value:

Actual value 0 ... +10 V (or 12 ... 20 mA) at F and reference potential at C result in flow from P → A and B → T.

Actual value 0 ... -10 V (or 12 ... 4 mA) result in flow from P → B and A → T.

Notice:Electrical signals provided via control electronics (e. g. actual value) must not be used for switching off safety-relevant machine functions.
